

Platform Performance Services.

Platform Performance Services – Standard Packages

PPS Go-Live Package

Plan and Execute Your successful Platform Launch.

Available for:

AWS IoT

Elastic Search/Kibana (ELK Stack)

Hybris - SAP C4/Hana

Intershop Commerce Suite

Liferay DXP

Microsoft Azure IoT

Siemens Mindsphere

Our Promise:

A tailored Solution That Fits Your Needs.

The PPS Go-Live Package engages your team at that very critical stage just before Platform launch. An experienced performance testing and tuning consultant from PPS will guide your project team to deliver a prescriptive roadmap to improve your performance and stability, refine your test scenarios and base line your performance metrics. Launch your project with frictionless deployment, that brings your instance back in hours, not days. Rest secure with the knowledge that it's going to stay that way the next few weeks when you see your heaviest load. A successful deployment is not just letting the first page display for the first user in the first days. It's the months that follow with a stable environment that continues to perform. To ensure

Launch Success You need experts who truly understand performance tuning for the database, Java Virtual Machine as well as code performance and stability. Also, you will need expertise in giving you the testing tool setup, definition and execution that your project needs to ensure critical bug free longevity. You won't find many, but you will find them at PPS.

For additional details please contact Our [Consulting Project Head](#).

What will you get?

- Performant System Stability
- Stable Deployment
- A roadmap for remediation and recommendations
- Expert performance tuning resources
- Identification of GoLive bottlenecks and roadblockers
- Refined and reusable test cases
